

**Which wheel studs do I need for my car when ordering a rear end?**

Most GM vehicles built after 1978 were factory equipped with metric (12mm) wheel studs. Most vehicles built prior to 1978 were factory equipped with 1/2" wheel studs, but some had 7/16" wheel studs. 5/8" wheel studs are for extreme horsepower drag racing applications.

Wheel studs are available in various lengths to suite your application and/or sanctioning body rule requirements.
