

Will your front control arms for the Dodge Ram 4x4 work on a lifted truck?

We have Dodge Ram 4x4 front suspension lower and upper control arms available for stock ride height trucks as well as for trucks with a 1"-3" or a 4"-6" lift.

When a Dodge Ram 4x4 is lifted the front control arms need to be longer than the factory front control arms to maintain proper front axle alignment. Just specify your lift amount in the option box when ordering and we'll send you the proper length control arms.

Follow the links below to view the front upper and lower control arms we have for the Dodge Ram 4x4:

1994-1999 Dodge Ram 4x4

2000-2002 Dodge Ram 4x4

2003+ Dodge Ram 4x4
